

Abdu Alim Arlikhozhayev

📞 672-673-7117 ✉ arlikhozhayevca@gmail.com 🔗 linkedin.com/arlikhozhayev 🐙 github.com/Arlikhozhayev

Technical Skills

Languages: C++, Python, Java, JavaScript (Node.js), TypeScript, SQL
Backend & Databases: Node.js, MySQL, RESTful APIs, Database Schema Design
Cloud & Infrastructure: AWS (EC2, S3, IAM), Terraform (Infrastructure as Code)
Systems & Tools: Git, GitHub, Linux (Ubuntu CLI), VirtualBox
Core Concepts: Data Structures & Algorithms, Object-Oriented Programming, Networking Fundamentals (HTTP/TCP), Debugging & Root Cause Analysis

Experience

Envia Oct 2025 – Jan 2026
Software Developer Intern Vancouver, BC

- Co-designed and built a subscription backend integrating RevenueCat webhooks (full lifecycle).
- Implemented an event-driven AWS system (Lambda, API Gateway) as the payroll source of truth.
- Exposed a subscription status API, decoupling billing logic from mobile clients.

Headstarter Jul 2024 – Sep 2024
Software Engineer Fellow New York, NY

- Developed 3 end-to-end AI projects and competed in 2 hackathons.
- Enhanced user engagement by 20% through interactive applications built with JavaScript, TypeScript, Next.js, Firebase, and Clerk.

Projects

FlashStudy AI | Next.js, JavaScript, Firebase, Clerk

- Migrated a flashcard application to a more scalable architecture using Next.js and Firebase, supporting authenticated users and persistent data storage.
- Designed backend logic to dynamically generate and organize learning content based on user input and progress, **enabling 1,000+ flashcards across 100+ topics.**
- Improved application reliability by implementing input validation, error handling, and debugging runtime issues across client and backend services.

Meal Planner AI | Next.js, TypeScript, Firebase, Clerk

- Built backend workflows to process user preferences and generate structured meal plans with calorie calculations.
- Implemented real-time data updates and optimized state management to **improve user retention by 15%.**
- Resolved data consistency and synchronization issues between frontend components and backend services to ensure reliable user experience.

macOS-Style Interactive Portfolio | React, Tailwind CSS, GSAP, Zustand

- Engineered a macOS-inspired interface featuring draggable and resizable windows using Higher-Order Components and global state management with Zustand.
- Designed reusable UI architecture and centralized state logic to manage window stacking, focus handling, and component lifecycle.
- Implemented smooth, performance-optimized animations using GSAP while maintaining component separation and scalability.

Education

Langara College Expected Dec 2026
Associate of Science Degree in Computer Science Vancouver, BC

- **Relevant Coursework:** Data Structures and Algorithms (C++), Discrete Mathematics, Database Systems, Unix Tools and Scripting
