Abdu Alim Arlikhozhaev

Vancouver, BC | 672-673-7117 | arlikhozhaevca@gmail.com | linkedin.com/in/arlikhozhaev | github.com/Arlikhozhaev | arlikhozhaev.dev

TECHNICAL SKILLS

- **Languages:** TypeScript, JavaScript, Java, C/C++, Python, SQL, Bash
- **Backend Systems:** Node.js, FastAPI, RESTful APIs, Celery, Redis, Auth.js
- **Databases & Storage:** PostgreSQL, MySQL, Supabase, Prisma ORM
- **Cloud & Infrastructure:** AWS (EC2, S3, Lambda, API Gateway), Terraform (IaC), Docker, GitHub Actions, Linux, Git
- **Frontend & Testing:** React, Next.js, Tailwind CSS, Vitest, Playwright

EXPERIENCE

Envia — Software Developer Intern — Oct 2025 – Jan 2026

Vancouver, BC

- Shipped server-side subscription enforcement for MVP launch, covering **4 entitlement states** (trial, active, expired, billing-retry) across all web clients, by integrating RevenueCat webhooks into a unified paywall authorization flow.
- Maintained **0 production incidents** on subscription access control across all post-launch releases and all web clients, by building an event-driven AWS stack (Lambda + API Gateway) as the real-time entitlement system of record.
- Eliminated manual environment setup and pre-release integration defects by provisioning reproducible dev/prod infrastructure with Terraform (IaC) and validating **100%** of API flows in Postman before client handoff.

OPEN SOURCE

typescript-eslint — ESLint plugin for TypeScript — Aug 2026 – Present

- Merged 2 PRs: fixed a false positive in unified-signatures when overload constraints were compared by AST node kind (#12741); reported meaningless void on non-call expressions (#12727).

PROJECTS

ReviewLens — Live

Next.js 14, TypeScript, PostgreSQL (Supabase), Prisma, OpenAI, Auth.js, Inngest, Vitest, Playwright

- Shipped a live CSV-to-insights pipeline (**500+ reviews/upload**, **<60s**) that clusters feedback and generates executive summaries in **15.4s** at **<$0.0004** OpenAI cost per **12-review** run, via embeddings, k-means, and gpt-4o-mini with atomic job claiming and Inngest/waitUntil on Vercel serverless.
- Hardened production APIs by making /process owner-only and gating dashboard, status, and export behind share auth, using scrypt-hashed passwords, HMAC httpOnly cookies, JWT edge middleware, Upstash rate limits, and owner-vs-viewer rules documented in ARCHITECTURE.md ADRs.
- Drove merge-ready quality with **93 Vitest tests**, **4 Playwright E2E specs**, and **5 GitHub Actions gates** per PR, mocking OpenAI in CI and running Postgres-backed E2E in Actions, and published a case study (**80% theme accuracy**, **33s p95** upload-to-dashboard).

AutoDev — Live

FastAPI, Celery, PostgreSQL, Redis, Next.js, Claude API, GitHub API

- Automated the code-quality feedback loop end-to-end — from static-analysis findings to a human-reviewable pull request — via a Claude-driven generate→validate→retry agent (**3 attempts/issue**) gated by **4-tool** static analysis (Radon, Ruff, Bandit, AST) and post-splice pytest.
- Architected an async FastAPI + Celery pipeline (PostgreSQL, Redis) so **10-minute** analyze/refactor jobs never block HTTP; shipped to Railway + Vercel with API-key auth, rate limiting, Alembic migrations, and task-status polling.
- Implemented AST-based splice and signature/import guards so unsafe LLM diffs can never commit — validated end-to-end on a live sandbox where the guard layer blocked every unsafe diff and the retry loop produced a merged, human-reviewable PR, backed by **46 tests** and CI (Ruff, pytest, ESLint, build).

ProfessorMatch AI — Live

Next.js 14, React, MUI, Node.js, SQLite, OpenAI, Pinecone, Vitest, GitHub Actions, Vercel

- Built a full-stack Next.js 14 app with **41 statically generated professor profiles** and streaming gpt-4o-mini chat grounded in retrieved review context, driving profile → chat conversion via deep-linked prompts.
- Designed a **3-tier** hybrid retrieval pipeline (Pinecone vector search → in-memory embeddings → keyword fallback) with graceful degradation for offline dev/CI, and shipped production auth (JWT, bcrypt, httpOnly cookies) and IP rate limiting backed by **27 automated tests** and GitHub Actions CI.

EDUCATION

Langara College — Associate of Science degree in Computer Science (Transfer Pathway) — Expected Dec 2026

Vancouver, BC

- Target Bachelor of Science in Computer Science Graduation: May 2028
